The UK's most sought after cutting edge design service

The only limitation is imagination

Mercia Waterjet cutting solutions limited, based in the heart of the West Midlands, provide a reliable and accurate cutting edge service to a diverse group of industries and unique operations across the UK.

We have the latest design Dynamic Mach3 high pressure 6000BAR (90,000PSI) waterjet cutting system, complete with high speed facility.

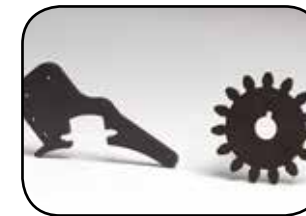

Waterjet is a cold cutting process, eliminating the possibility of thermal distortion or heat affected zones. There are no scaly edges with the abrasive Waterjet cuts, which makes it easier to produce a high quality weld. We can work with your own designs and drawings. We can also offer our expertise in design and drawing technology. In addition we have the capability of reverse engineering, designing precise drawings from rough sketches or even product samples to produce an accurate finished component.

The quality and accuracy of our dynamic waterjet cutting system is second to none, with the flexibility and versatility to cut virtually any shape, 4 Mtr x 2 Mtr dimensions from 0.1mm to 200mm thick, complete with precision tolerances, accurate to +/-0.1mm, leaving a satin smooth finish, with zero or minimal edge taper and consistent geometry. This can often eliminate additional machining or secondary operations, such as dressing or cleaning. The narrow kerf removes the smallest amount of material, allowing for optimal cutting and less waste.

From design to finished product, Mercia Waterjet Cutting Solutions Ltd offer our full commitment to quality, accuracy, reliability and customer service. Ensuring, you the customer are completely satisfied. We provide a speedy response with all quotations and an expedient service on all subsequent orders. When you need it quickly, we can process to meet your deadlines. Mercia Waterjet can also offer a same day service when necessary. All aspects of our customer service are catered to satisfy all of your objectives.

The benefits at Mercia Waterjet are simple, we offer a cost effective and expedient service with accurate high quality. Our Dynamic waterjet cutting system dramatically reduces your costs, compared to other profiling methods, processing times are also much faster, offering improved delivery dates. The accuracy and high quality finish, results in less work for you.
